

# Phase monitoring relay RP33

3-phase monitoring of phase-neutral voltages

Built-in adjustable time-delay

Separate adjustments for minimum and maximum limits

1-pole relay output 8 A / 250 V AC

AC supply voltages up to 3 x 415 VAC

Made in accordance with the **C€** and EMC regulations

The C-mac<sup>®</sup> module type RP33 meters its own 3-phase supply voltage, and checks that all 3 phase-neutral voltages are within the adjusted limits, and in that case, the output relay is activated.

If one or more of the voltages are over or under the limits for a period of time, which exceeds the set delay, the relay releases.

The module can operate from 80 to 120% of the nominal supply voltage.

## **NOTE:**

The unit can only be used at 3 phases plus neutral. If neutral is not available, monitoring module type RP30 must be used instead.
